SUMMARY

Full Stack Engineer with experience building 0→1 products in fast-paced startup environments. Skilled in developing scalable web applications, high-performance backend systems, and AI-powered platforms using React, Next.js, React Native, Go, Python, FastAPI, PostgreSQL, Redis, Docker, Kubernetes, and AWS. Experienced in designing distributed microservices, REST/GraphQL APIs, and cloud-native infrastructure, with a strong passion for performance optimization, system design, and open-source software.

SKILLS

- **Languages:** JavaScript, TypeScript, Python, Go, C/C++
- **Frameworks & Libraries:** Next.js, React, React Native, Svelte, Express.js, FastAPI, Django, Fiber, GraphQL, gRPC
- **Databases & Baas:** PostgreSQL, MySQL, MongoDB, SQLite, Firebase, Redis, Supabase, ScyllaDB, Cassandra
- **DevOps & Cloud:** Docker, Nginx, Kubernetes, AWS, GCP, CI/CD, Git, Kafka, Cloudflare,

WORK EXPERIENCE

Full Stack Engineer | Saciva | Full Time

NOV 2024 - APR 2026

- Led the end-to-end development of a product from 0 → 1 using Next.js, FastAPI, PostgreSQL, and Redis, serving **5K+** users in a fast-paced startup.
- Designed scalable REST APIs, **microservices**, and a Typesense-powered recommendation engine, **reducing content search latency by ~60%** while improving discovery.
- Optimized PostgreSQL queries, implemented real-time notifications, and automated CI/CD with GitHub Actions, **reducing deployment time by ~70%**.
- Deployed and monitored applications on **AWS (EC2, S3, RDS)**, ensuring reliable production **releases and high availability**.

Backend Engineer | Telo | Part time

DEC 2025 - MAR 2026

- Developed AI-powered backend services with FastAPI, PostgreSQL, Redis, LangChain, and OpenAI, **processing 10K+ AI requests with low-latency responses**.
- Built document-processing and automation pipelines using LLMs, reducing manual **processing time by ~80%** and **improving workflow efficiency**.
- Collaborated directly with product stakeholders in a **0→1 startup environment**, shipping production features **rapidly and iterating based on user feedback**.

React Native Developer | HumanEra Intelligence | Intern

SEP 2024 - NOV 2024

- Developed and shipped cross-platform mobile features using React Native application **used by 1K+ users**.
- Implemented **offline-first data synchronization, background data sync, push notifications**, and native Android integrations using React Native and **Kotlin**, enabling seamless **app functionality even when users were offline**.

OPEN SOURCE PROJECTS

FlashORM: High-Performance Multi-Database ORM (Go)

- **A high-performance ORM in Go** with sqlc-like functionality, focused on speed and type safety.
- Designed type-safe code generation supporting Go, JS/TS, Python, java.
- Implemented support for multiple databases: MySQL, PostgreSQL, SQLite, Cassandra, scylladb.
- Developed a **plugin-based architecture** and built-in Studio for schema management, enabling database operations with or without using the ORM.

AstraAPI: High-Performance Backend Framework for Python (C++)

- Built a high-performance backend framework for Python, implemented in C++ for maximum speed and efficiency.
- Developed a custom native HTTP server, eliminating ASGI/Starlette dependencies with a fully C++-based runtime.
- Designed a lightweight multi-worker architecture, **using ~100 MB RAM for 3 workers (vs. ~300–500 MB in typical Python setups)**.
- Achieved **84–88% worker efficiency**, optimizing concurrency and resource utilization.
- Engineered the system to **handle ~200K requests/second per worker**, enabling high scalability and throughput.

PROJECTS

- **AssumioAI**: Developed a chat-first AI platform featuring a multi-agent pipeline that analyzes market size, competition, feasibility, risks, and execution strategy to validate startup ideas. Built with FastAPI, Next.js, PostgreSQL, Pinecone, and **LangChain, processing 50+ data sources** and generating comprehensive startup **validation reports in under 60 seconds**.
- **OmniAI**: Architected and developed a distributed AI platform that enables users to chat with documents and websites using Retrieval-Augmented Generation (RAG). Designed distributed ingestion pipelines for document uploads, OCR, URL crawling, vector embeddings, and semantic search. Built scalable microservices communicating over gRPC and RabbitMQ, using Next.js, Go/Fiber, FastAPI, PostgreSQL, Redis, Pinecone, Docker, LangChain, and RabbitMQ.
- **AiResume**: AI-powered resume SaaS for generating resumes and cover letters, analyzing CVs, and producing ATS-friendly results. Includes an admin panel, user and plan management, Razorpay payments, and full role-based access control. Built with Next.js, Firebase, OpenAI, FastAPI, Razorpay, MySQL, Docker, and Nginx.
- **Proxyon**: Developed a website that allows users to configure an API gateway or load balancer by connecting nodes (like n8n), enabling setup with just a few clicks. Built with Next.js, React Flow, TailwindCSS, Framer Motion, Go, Fiber, NATS, MongoDB, PostgreSQL, Docker, Nginx, S3, Terraform, and CoreDNS.
- **khelratna**: Developed a WebView-based cricket tournament platform for hosting local matches and tournaments, **serving 1,000+ registered users**. Built a comprehensive admin panel with role-based access control (RBAC) to manage users, tournament owners, captains, and organizers. Designed a **highly optimized backend capable of simultaneously live-streaming two matches to 600+ concurrent users on a 1 vCPU, 2 GB RAM VPS**. Built with Next.js, Socket.IO, Go, FastAPI, Supabase, Flutter, Redis, Docker, and Firebase.
- **Passman**: An ultra-secure password manager with end-to-end zero-knowledge encryption. It supports authenticator app-based verification, live session management, and a zero-trust mode that allows only a single active, IP-bound session to prevent session hijacking. Built with Svelte, FastAPI, Redis and PostgreSQL.
